Projects

- **React Blog Website** React-powered website, built with a seamless combination of HTML, CSS, Bootstrap, and React. Pages load dynamically without the need for full-page refreshes, providing users with a lightning-fast and fluid browsing experience. From a clean UI design to responsive layouts, every element has been carefully crafted to ensure the site looks great and functions flawlessly across all devices.

- **Chatbot Application** Chatbot Application is the wonderful project in which we can chat with the AI chatbot and anything you want to know about anything you can ask to the AI Bot. This project is fully responsive and has a clean UI/UX. This application built with Html, CSS and JavaScript.

- **eCommerce Website** eCommerce is a successful Open-Source project that I created by using Html, Css, JavaScript, and React.This project is fully responsive and has a clean UI/UX.Which have been featured on some of the biggest tech sites like CSS-Tricks,Hostinger,W3School etc used by thousands of developers globally.

- **Weather Application** Weather Application is the wonderful project in which we will see the weather of several country and their cities this application built with Html, CSS , JavaScript.

- **Todo List** I created the frontend of Todo List web app by using HTML, CSS, and React in which list data is stored in local storage because when we refresh the page data will not be lost. we can add, delete and save the data in the list and local storage.

- **Ball Bouncing Game** Ball Bouncing Game is a successful Open-Source project that I created which have been featured on some of the biggest tech sites like CSS-Tricks, Hostinger, W3School etc used by thousands of developers globally.
